Final Project Report: Participant Support for the XIXth Conference on the Dynamics of Molecular Collisions

Conference held July 13-18, 2003
Granlibakken Conference Center
Tahoe City, California

Chair of meeting and PI for AFOSR support: Laurie J. Butler

Abstract

The crucial AFOSR support of this prestigious international meeting, the XIXth Conference on the Dynamics of Molecular Collisions, included participant support for invited speakers and other presenting authors. The AFSOR support, under award number F49620-03-1-0286, was $10,000, with a duration of 5/1/2003 - 12/31/2003. AFOSR has traditionally been generous in support of this meeting, as it draws a broad spectrum of the top researchers and young talent across several areas of direct interest to the AFOSR mission. The invited speakers included several with AFOSR funding, and the invited and contributing participants are drawn from both educational institutions and national laboratories.

Conference History and Scope

The Dynamics of Molecular Collisions Conference draws participants interested in all aspects of molecular collision processes at the forefront of modern physical chemistry. Traditionally these have included experimental and theoretical studies of elastic, inelastic, and reactive encounters involving atoms, molecules, ions, clusters and surfaces, as well as half-collisions including photodissociation, photo-induced reactions and photodesorption. Speakers are chosen to represent the most exciting advances in both the core and multidisciplinary forefronts of the study of molecular collision processes, broadly defined. In recent years topics of central interest have included quantum dynamics of surface photoprocesses, coherent control in ultrafast chemical processes, radical photochemistry and reaction dynamics, and phase and amplitude control of molecular wavepackets. This meeting has had a distinguished history, beginning in 1965 as a Gordon Research Conference, and continuing independently when the number of participants grew to exceed the GRC limit. It is held now every two years.

The scientific program for the meeting in 2003 included the most exciting advances in these core areas and advances in new multidisciplinary studies of molecular collision processes. In 2003 the invited sessions covered topics ranging from bimolecular collision dynamics to interfacial dynamics in biological systems. In addition to the invited oral sessions and contributed poster sessions, the scientific program included a formal session consisting of five contributed talks selected from the submitted posters. The 2003 meeting, the nineteenth in the series, was organized and chaired by Prof. Laurie J. Butler, The University of Chicago, and vice-chaired by Dr. Al Wagner, Argonne National Laboratory. The responsibility of serving as sponsoring society, or agency, falls on the institutions of the chair and vice-chair for a given year.

Recent meetings in this series have been organized by James T. Muckerman (Brookhaven National Laboratory), James J. Valentini (Columbia University), George Schatz (Northwestern University), Daniel Neumark (University of California, Berkeley), Joel M. Bowman, (Emory University), and James Farrar (Rochester University). Although the meetings have been held in the United States, speakers and general attendance have always included a large component of participants from abroad. The meeting has thus always been international in scope.

The Program in 2003 and Participation

The scientific program at this meeting included both invited oral presentations, listed in Appendix A at the end of this report, and 115 contributed papers, also listed in Appendix A. The 2003 meeting drew 160 participants, listed in Appendix B (the 1999 and 2001 meetings in this series had 145 and 125 respectively.) The meeting retained the Gordon conference spirit with scientific discussion extending throughout the afternoon and long into the night in poster sessions, so stimulated cross-fertilization between senior scientists and students/postdocs. The participation of graduate students in this premiere meeting was supported in part by substantial funds from one of the host institutions; forty-seven graduate students participated in the meeting. As done for the first time in 2001 with great success, in 2003 five of the most significant contributed papers were selected for both poster and oral presentation. The invited speakers were chosen to represent the most exciting advances in both the core and multidisciplinary forefronts of molecular collision phenomena and were organized into scientific sessions given in Appendix A. We took care to span the field broadly defined, with speakers ranging from the long-established leaders, such as Nobel Prize awardee Yuan T. Lee, to the most exciting young scientists, such as Ka Yee Lee and Stuart Althorpe, doing pioneering work in both the core and multidisciplinary forefronts of the field.

Impact on AFOSR Research

The infusion of young talented scientists into the research areas critical to the AFOSR mission can be facilitated by a premiere meeting of this kind. While the chemistry and physics departments of many major research universities focus on establishing interdisciplinary areas such as nanoscience and biophysics, pioneering research in core areas such as chemical kinetics and dynamics and surface/materials chemistry and catalysis continue at both top universities and government laboratories. Such research is critical to the design and utilization of propellants and the development of materials robust to flight in the upper atmosphere. An important function of this conference is to bring together top Ph.D. students working in several areas of physical chemistry with the leading researchers at universities and national laboratories in these fields.

The invited speakers include Nobel Prize winner Yuan T. Lee, whose pioneering studies of O + hydrocarbon reactions in the 1980's and 1990's opened up the exact quantum mechanical prediction of elementary reactions key in oxygen atom reactions both in the gas phase and at surfaces; J rgen Troe, a major figure in chemical kinetics in the world for three decades; Bruce Kay and Bret Jackson, whose studies of chemical reactions at interfaces is key to understanding hot atom reactions at surfaces; Rainer Beck, whose work on the vibrationally mediated decomposition of methane at surfaces open up new avenues for controlling heterogeneous chemistry; as well as several top researchers who are funded by your program at AFOSR: Paul Dagdigian, Daniel Neumark, Millard Alexander, David Yarkony and Hanna Reisler. It is extremely important to bring Ph.D. students into contact with the breadth and excitement of such

research so that they consider positions in areas of research critical to the AFOSR upon graduation. To that end we have raised considerable money to support graduate student travel to the meeting; we hope AFOSR can provide partial travel support for domestic invited speakers, the premiere overseas invited speakers in this field for whom we do not have support, and a select few contributing scientists who are just initiating their research programs so do not yet have significant grant support.

Meeting Format

The meeting included nine half-day oral sessions and four poster sessions over five days. Each of the eight invited oral sessions has an overview talk (40 min. + 15 min discussion) and two or three research talks (21 total at 40 min. each + 15 min. for each discussion). The contributed oral session had five speakers selected from the most exciting contributed papers. Ample time was allotted to promote vigorous discussion; there were no parallel sessions. As this report is being submitted electronically, I will mail a copy of the program book for the meeting to our AFOSR program manager under separate cover.

Dissemination of Proceedings

The meeting was open to all applicants and was been publicized widely through the web (conference web site http://home.uchicago.edu/~ljb4/DMC2003.html) and various professional societies. The conference announcements were been distributed to a much wider mailing list than in previous years, with the kind cooperation of former organizers of major meetings in the US and in Europe. Although no publications or proceedings are produced in this meeting series, there are no restrictions on dissemination of results presented at the meeting. The book of abstracts for the meeting was distributed to all participants, with extras made publicly available, and posted on the web site.

Summary of Funding

Breakdown of Participant Support Costs supported by AFOSR funds:

Support for domestic invited speakers (18 @ $300/speaker) Dagdigian., Harding, Neumark, Sanov, Gray, Hase, Kay, Jackson, Alexander, Zwier, Reisler, Levy, K. Y. Lee, Schulten, Wagner, Truhlar, Bowman, Yarkony	$5,400
Support for overseas invited speakers (5 @ $600/speaker) not covered by our PRFSE support Halberstadt, Schinke, Meijer, Balint-Kurti, Orr-Ewing	$3,000
Support for assistant professors w/o significant grant funding (4 @ $400/speaker) Wade, Shaffer, Mueller, Duffy	$1,600
Total AFOSR support	$10,000

APPENDIX A

Titles of Invited and Contributed Papers Presented Orally

REACTIVE COLLISIONS I

Paul Dagdigian, *The Johns Hopkins University* [Overview]
Progress report on reactive collisions: Nonadiabatic effects, polyatomic reactions
Larry Harding, *Argonne National Laboratory*
Radical-Radical Reactions
Kopin Liu, IAMS, *Academica Sinica*
Imaging a polyatomic reaction: From product pair-correlation to reactive resonance
Stuart Althorpe, *University of Exeter*
Probing quantum reaction dynamics with plane wave packets

INTERACTIONS AND DYNAMICS IN CLUSTERS

Daniel Neumark, *The University of California, Berkeley* [Overview]
Spectroscopy and dynamics in clusters spanning the molecular to nanodroplet size regimes
Andrei Sanov, *The University of Arizona, Tucson*
Photoelectron imaging of molecular cluster anions
Stephen Gray, *Argonne National Laboratory*
The role of reactant channel complexes in the $OH + CO \rightarrow H + CO_2$ reaction
Nadine Halberstadt, *Lab. Physique Quantique, IRSAMC*
$Ar\cdots I_2$: A model system for complex dynamics

MOLECULE-SURFACE INTERACTIONS

William Hase, *Wayne State University* [Overview]
Dynamics of Energy Transfer and Chemical Reaction in Gas-Surface Collisions
Bruce Kay, *Pacific Northwest National Laboratory*
Molecular Beam Studies of Dynamics and Kinetics on Ice and Oxide Surfaces
Rainer Beck, *cole Polytechnique F d rale de Lausanne*
State resolved gas - surface reactivity of vibrationally excited methane prepared by pulsed laser radiation
Bret Jackson, *University of Massachusetts*
Eley-Rideal and Hot Atom Reactions on Metal and Graphite Surfaces

PHOTODISSOCIATION AND ISOMERIZATION DYNAMICS

Reinhard Schinke, *Max Planck Institut, G ttingen* [Overview]
Dissociation of Molecules in Ground and Excited Electronic States
Yuan T. Lee, *Academica Sinica, Taiwan*
Isomerization and Dissociation of Aromatic Hydrocarbons
Joel Bowman, *Emory University*
Full-dimensionality quantum calculations of acetylene/vinylidene isomerization
Hanna Reisler, *University of Southern California*
Nonadiabatic interactions in the photochemistry of radicals and covalently bound dimers

INELASTIC COLLISIONS

Millard Alexander, *University of Maryland* [Overview]
The long saga of the NO molecule in the investigation of inelastic scattering
Timothy Zwier, *Purdue University*
Laser probes of the potential energy landscapes and conformational isomerization dynamics of a series of flexible biomolecules
Gerard Meijer, *University of Nijmegen*
Deceleration and trapping of polar molecules

NONADIABATIC REACTION DYNAMICS

David Yarkony, *The Johns Hopkins University* [Overview]
Beyond diabolical: Higher dimensional conical intersection
Gabriel Balint-Kurti, *University of Bristol*
Electronically Non-adiabatic Dynamics in Photodissociation and Reactive Scattering
Donald Truhlar, *The University of Minnesota, Minneapolis*
New Methods for the Theoretical Treatment of Electronically Nonadiabatic Reactions

DYNAMICS AT BIOLOGICAL INTERFACES

Donald Levy, *The University of Chicago* [Overview]

Biological Molecules in the Gas Phase: Urocanic Acid, Coumaric Acid, and Anthranilic Acid

Ka Yee Lee, The University of Chicago
Collapse Mechanism in Lung Surfactant

Klaus Schulten, *Beckman Institute, Univ. of Illinois*
Elementary Molecular Processes in Vision

REACTIVE COLLISIONS II

Albert Wagner, *Argonne National Laboratory* [Overview]
Progress report on reactive collisions: from dynamics to kinetics

Piero Casavecchia, *Universita di Perugia*
Crossed beam reactive scattering using *soft* electron-impact ionization for product detection: bridging the gap between dynamics and kinetics of polyatomic multi-channel reactions

Andrew Orr-Ewing, *University of Bristol*
The dynamics of reactions of chlorine atoms with organic molecules

Juergen Troe *Universitat Goettingen*
Capture processes in reaction kinetics

SELECTED CONTRIBUTED PAPERS

M.C. Bacchus-Montabonel, *LaSIM, Lyon*
Non-Adiabatic Effects in the Photodissociation of Bromoacetyl Chloride

Holger Vach, *PICM cole Polytechnique, Palaiseau*
Internal State Excitation and Molecular Dissociation in the Surface Scattering of $(N_2)_n$ and $(O_2)_m$ Clusters

A Semiclassical Time-Dependent Wavepacket Approach for the Calculation of Reaction Probability

F. Paesani, R. Zillich and K.B. Whaley
OCS in small para-hydrogen clusters: energetics, structures and superfluidity<.a>

S. Yang and W. H. Miller
Some new developments in the application of Quantum Instanton model to rate constant calculation

M. Shane Bowen, Daniel C. Luhrs, and Robert E. Continettti
Stable and Dissociative Photodetachment Studies of $C_3H_5O^-$ and $C_3H_4OH^-$

Christopher M. Laperle, Elad Harel, Jennifer Mann and Robert E. Continettti
Charge Exchange Dynamics of Molecular and Cluster Cations

Zhou Lu and Robert E. Continettti
Dissociative Photodetachment Study of the Acetate Anion

Astrid M ller , J rgen Plange, James B. Clark, Lora-Nugent-Glandorf, Veronica M. Bierbaum and Stephen R. Leone
Femtosecond Valence and Core Photoelectron Molecular Dynamics

Dunyou Wang, Winifred M. Huo, Christopher E. Dateo, David W. Schwenke, James R. Stallcop
Quantum scattering study of the N+N_2 exchange reaction: state-to-state reaction probabilities, reactive resonances, initial state selected reaction probabilities and product distributions

B. Lasorne, M. Desouter-Lecomte, D. Lauvergnat, and G. Dive
Quantum dynamics in reduced dimensionality

David E. Weeks and David R. Yarkony
Non-Adiabatic Dynamics of B + H_2

James K. Parker, Louis J. Stief, Walter A. Payne, Jr., Regina J. Cody, Fred Nesbitt
First Direct Measurement of the Rate Constant for the Reaction Cl + CH_3

Robert E. Zillich and K. Birgitta Whaley
Calculation of Rotational Spectra of Molecules in Superfluid Helium Clusters

David W. Chandler
Energy Transfer in Atom/Diatom and Diatom/Diatom Systems Studied by Velocity Mapped Ion Imaging

S. C. Althorpe
Time-dependent quantum description of Ar + NO: does the scattered NO rotate clockwise or anticlockwise, and why?

Levi J. Collier and **Julie A. Mueller**
Emission Spectroscopy of Photodissociating Methyl Formate

Yuval Ganot, Amir Golan, Salman Rosenwaks and **Ilana Bar**
Non-adiabatic dissociation of rovibrationally excited acetylene

B. Ruscic, **M. L. Morton**, R. E. Pinzon, B. Wang, A. F. Wagner Photoionization Mass Spectroscopy as a Means to Produce Reliable Thermochemical Values for Input into the Active Thermodynamics Tables"

APPENDIX B

LIST OF PARTICIPANTS

Millard Alexander
Chemistry Department
University of Maryland
College Park, MD 20742-2021 U.S.A.
mha@wam.umd.edu
301-405-1823

Laurence Angel
Department of Chemistry/216
University of Nevada, Reno
Reno, NV 89557 U.S.A.
angel@chem.unr.edu
775-784-1339

Dmitri A. Babikov
MS B-268, T-12
Los Alamos National Laboratory
Los Alamos, NM 87545 U.S.A.
babikov@lanl.gov
505-665-2278

Gabriel Balint-Kurti
School of Chemistry, University of Bristol
University of Bristol
Bristol, BS8 1TS United Kingdom
Gabriel.Balint-Kurti@Bristol.ac.uk
44-117-9287662

Girts Barinovs
Theoretical Chemistry Group, Leiden Institute of Chemistry
Leiden University, Postbox 9502
2300 RA Leiden, Netherlands
g.barinovs@chem.leidenuniv.nl
+31-71-5274504

Stuart Althorpe
School of Chemistry, Stocker Rd.
University of Exeter
Exeter, EX4 4QD UK
s.c.althorpe@ex.ac.uk
44 1392 263 473

Florian Ausfelder
Mudd Chemistry Bldg.
Stanford University
Stanford, CA 94305-5080 USA
f.ausfelder@stanford.edu
650-725-2983

Marie-Christine Bacchus
Laboratoire de Spectrométrie Ionique et Moléculaire
Bât. Alfred Kastler, Université Lyon I
69622 VILLEURBANNE , Cedex France
bacchus@lasim.univ-lyon1.fr
+33(0)4 72 43 10 83

Ilana Bar
Department of Physics
Ben-Gurion University of the Negev
Beer Sheva, 84105 Israel
ibar@bgumail.bgu.ac.il
972 8 6461571

Jeffrey Bartz
Kalamazoo College
1200 Academy St.
Kalamazoo, MI 49006 U.S.A.
jbartz@kzoo.edu
269-337-7021

Hans Bechtel
Dept. of Chemistry, Box 173
Stanford University
Stanford, CA 94305 USA
hbechtel@stanford.edu
650-723-4334

Kristie A. Boering
Department of Chemistry
University of California, Berkeley
Berkeley, CA 94720-1460 U.S.A.
boering@cchem.berkeley.edu
510-642-3472

Joel Bowman
Dept. of Chemistry, 1515 Pierce Drive
Emory University
Atlanta, GA 30322 U.S.A.
bowman@euch4e.chem.emory.edu
404-727-6592

Lynne Butler (Conference assistant)
Dept. of Mathematics
Haverford College
Haverford, PA 19041
lbutler@haverford.edu
610-896-1300

Piero Casavecchia
Via Elce Di Sotto, 8
Università di Perugia
Perugia, 06123 Italy
piero@dyn.unipg.it
39-0755855514

Michele Ceotto
Department of Chemistry
University of California
Berkeley, CA 94720 U.S.A.
ceotto@uclink.berkeley.edu
510-643-1169

Rainer Beck
EPFL-ICMB-LCPM
École Polytechnique Fédérale de Lausanne
Lausanne, CH-1015 Switzerland
Rainer.Beck@epfl.ch
